TIXstream FX

FAST FILE EXCHANGE MADE EASY

TIXEL

File exchange has become an essential part in today's digital business. Especially bulk data transfers over large distances can become a crucial factor when speed and efficiency matters.

TIXstream FX is TIXEL's light-weight turn-key solution for high performance file exchange, focused on ultimate user experience. It allows you to optimize your file-based workflows using standard web technology along with TIXEL's bullet

proof transfer acceleration engine. It is easy to set up and integrate and delivers maximum speed.
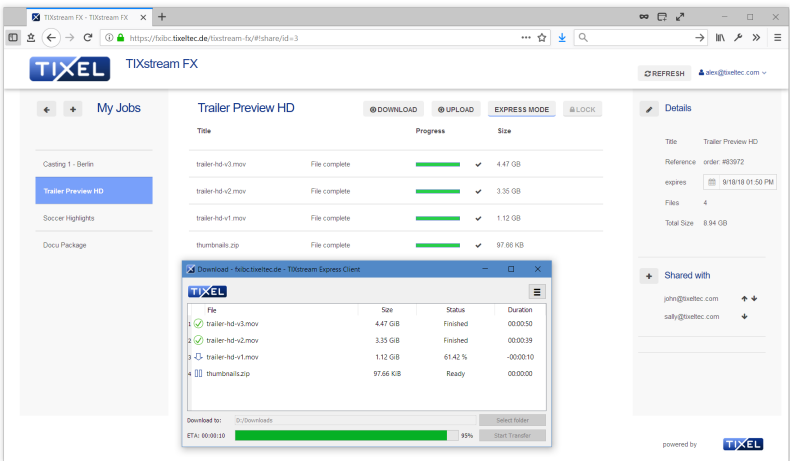

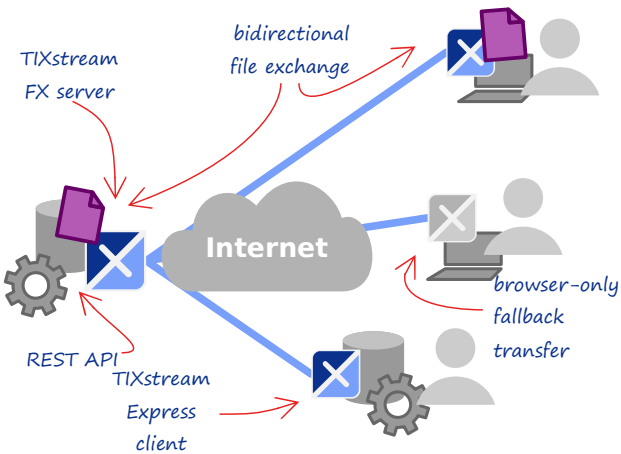

As opposed to typical cloud services it is entirely operated in your IT. So you keep full control over your data and avoid time-consuming extra transfers.

TIXstream FX is the smart alternative to file sharing services in the cloud and full-blown on-premise content management systems.

Seamless Integration	Great User Experience	High Performance
Easy configuration allows smooth integration in your workflows	Clear web interface for regular and spontaneous up- and downloads	Secure file transfers at maximum speed with TIXstream Express

HOW IT WORKS

As a scalable solution TIXstream FX perfectly grows with evolving requirements. It runs as a stand-alone turn-key solution and smoothly fits into your environment.

- TIXstream FX is set up and operated by your IT – on-premise or in your cloud data center
- You define who may upload or download files
- Files are directly uploaded to (and downloaded from) your server via web browser or with our TIXstream Express (TXE) client application
- TIXstream FX can also be controlled by your processes via a light-weight REST-AP

WHAT YOU GET

- Clear user interface for easy one-click file exchange
- Easy access for regular and one-time users
- Works with any standard web browser on desktop or mobile devices – no software installation at end user device required (browser-only operation)
- Native TXE client application for Windows, Linux and macOS, seamlessly integrated into browser based UI
- Fast and secure transfers on any network over any distance
- Easily customizable, including meta-data editing and workflow integration
